

## **Year 7 Geography**

Hi Year 7, I hope you're continuing to get to grips with map skills. This week you're going to be looking at relief.

### **Task 1:**

Read through the PowerPoint on relief. By the end of this lesson you'll be able to understand how height is shown on a map. How can a hill be shown on a map? Read through each slide carefully and note down the three types of way. Beside them, write or draw a small explanation of what each one is.

- Layer shading
- Spot heights
- Contour lines

Task 2: Complete the page 'Stop and admire the view,' you've already completed part one. Write the answers to steep or flat, and the questions on contour lines.

Extension: think of three reasons why contour lines are useful.

Task 3: Complete the 'What a relief' activity sheet. This does not need to be printed, you can complete all of these activities in your workbook by drawing them.

Optional task 4: If you'd like to turn your contour knowledge into a craft activity. Create your own contour island using card and glue.
